EDUCATION

GLA University, Mathura, UP

2023 - 2027

B.Tech - Computer Science and Engineering Specialization in AI and Analytics - CGPA - 8.5

EXPERIENCE

Project Intern – IIT Bombay 🔗

May 2025 – July 2025

- Developed a monolithic backend architecture using Django to collect, process, and expose real-time traffic data through REST APIs, integrating seamlessly with a React.js frontend.
- Implemented scheduled background tasks using Celery to fetch road speed data from the Google Maps API every 15 minutes, process traffic information, and store it in a relational database.
- Enhanced backend by debugging APIs, optimizing database, implement authentication with Djoser.
- Tech:** Python, Django, DRF, Celery, Djoser, React.js, MySQL, Azure, Google Maps API, REST APIs

Open Source Contributor – Open Climate Fix 🔗

Dec 2024 – Mar 2025

- Contributed to multiple Python-based backend repositories by implementing features, fixing bugs, and improving code quality in a collaborative open-source environment to increase project reliability.
- Improved CI/CD workflows with GitHub Actions, and developed modular Pytest test suites.
- Tech:** Python, FastAPI, PostgreSQL, Docker, GitHub Actions, Pytest, Git, GitHub, REST APIs

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL.

Frontend & APIs: React.js, Streamlit, HTML, CSS, RESTful API Design.

Backend Frameworks: Django, Django REST Framework (DRF), FastAPI.

AI & ML: OpenAI API, Azure AI Studio, RAG, Machine Learning, Deep Learning, scikit-Learn.

Databases & DevOps: PostgreSQL, Docker, CI/CD (GitHub Actions), Redis, Celery, Microservices, OOPS.

PROJECTS

Plot Wizard (Data Visualizer & ML/DL Learning Platform) 🔗

- Built an interactive data visualization and ML learning platform enabling real-time data analysis.
- Integrated Azure AI and OpenAI APIs to generate code snippets and insights for users.
- Automated PDF analytics reports for users and included an AI chatbot trained on ML/DL concepts.
- Tech:** Streamlit, Python, NumPy, Pandas, Azure AI, OpenAI, scikit-learn, SciPy, Matplotlib, Seaborn

GPS Toll-based System Simulation 🔗

- Developed a Django-based GPS toll system vehicle tracking, distance-based toll calculation, automated invoicing, and digital payment workflows.
- Reduce vehicle queuing and toll-payment delays, with published simulations reporting up to **68.99% lower delay**.
- Tech:** Python, Django, DRF, SQLite, Razorpay, Leaflet, OpenStreetMap, HTML, CSS, JavaScript, Pandas

CERTIFICATIONS

- Microsoft Certified: AI-900 (Azure AI Fundamentals)
- Microsoft Certified: AZ-900 (Azure Fundamentals)
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

ACHIEVEMENTS

- Secured **2nd Rank** among **95** students in the 2nd year of B.Tech in academics
- Solved **500+** DSA problems on LeetCode and attained a **1600+ Contest Rating**, demonstrating strong problem-solving skills.
- Successfully completed **Hacktoberfest 2024** by contributing 5+ accepted pull requests to open-source GitHub repositories.
- Mentored **600+** students in GCP through the **Google Cloud Arcade Facilitator Program**.
- Served as a **Microsoft Learn Student Ambassador (MLSA)**, conduct workshops on various AI topics for students worldwide.
